

Project: Flattie

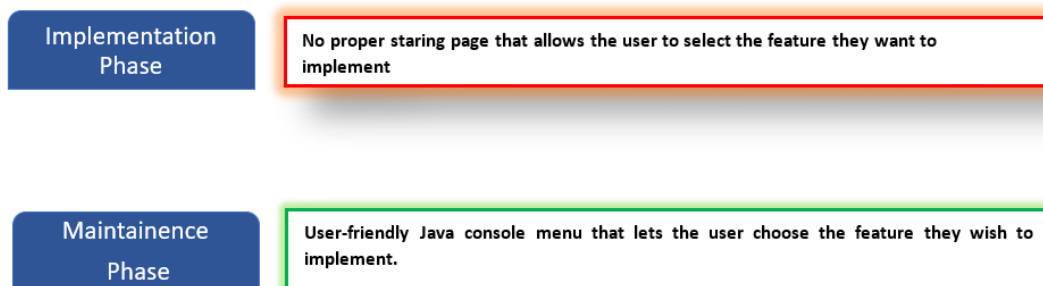

Task 1: Feature Improvement

Feature 1: Grocery List

For this task the existing feature of Grocery list from the initial requirement sheet is chosen. As there was a failure in the creation of this feature during the coding phase, considering the vitality and usefulness of the feature for the end user, this is taken up for improvement in the maintenance phase.

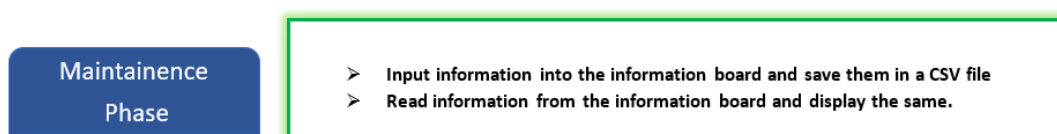

Feature 2: Main page of the application

Task 2: Feature Addition

For this task, we chose to create an "Information Board" for the flat mates where a person can leave a message with his name and date and all the others can view them. This feature aids in building communication be it for planning fun activities, providing intimation about important events or even as simple as a quick chat.

Inputs to the Group members of the Testing Phase

- Please specify the right path of the CSV files in the code as the path depends on where you save the CSV files.
- When running the option 1 of in the console, please use the path of the location of the Gradle file.
Presently, it is,
D:\Digital_Engineering\Summer_2022\SoftwareEngineering\Assignments\Submission2\Gradle\java-gradle-template-main\java-gradle-template-main
- Certain issue persists in relation to the database connection of flat mates and in writing the csv files.
